DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art disclosed in the instant application in view of Liu et al.

The prior art disclosed in the instant application (see Fig. 3) shows the packaging structure of the claimed invention except a ringed projection being formed on the top of the heat slug so that the molding compound encapsulating the chip would not cover the portion of the heat slug externally exposing the outer heat dissipating surface. Liu discloses the heat slug 1 having ring projection 13 to prevent the encapsulating compound to cover the portion of the heat slug 1 (col.1, lines 59—67). It would have been obvious at the time the invention was made to a person having ordinary skill in the art to have ring projection as disclosed by Liu et al. in the structure shown in the instant application as the prior art for allowing the exposed portion of thee heat slug to efficiently dissipate heat. Regarding to claims 5, 6, 11, 12, 14, 15, Liu discloses the ring projection except specifying its size. It would have been an obvious matter of design choice to have the ring projections of being from 10 µm to 20 µm in height and from 100 µm to 500 µm in width since such a modification would have involved a mere change in

Page 3

the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. *In re Rose*, 105 USPQ 237 (CCPA 1955).

The method steps of claims 13-16 are necessitated by the device structure as shown on Fig. 3 of the instant application and disclosed by Liu et al.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Boris L. Chervinsky whose telephone number is 703-308-5429. The examiner can normally be reached on 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren E. Schuberg can be reached on 703-308-4815. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9318 for regular communications and 703-872-9319 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-5115.
